ABOUT US

WHO WE ARE

Forensic Five is a multi-level penetration & Cyber security assessment firm. We focus on auditing your business applications, technology, software, policies, personnel & processes. Our comprehensive testing framework is designed to educate, identify & protect.

We are living in a connected and turbulent era of data vitality, with many facets of our lives tangled in a 24/7 data exchange. Security, Privacy & Individual Freedom, are frequently at risk, not only by the domineering corporate services that we rely on daily to function, but by those that seek to exploit our privacy for their illegal and selfish gain.

Forensic Five was built on the foundation of trust and transparency, delivering excellence through an educative approach that works directly with organizations. Working with auditors, lawyers and business leaders we will continue to pave the way for a digitally secure Canada.

SOLUTIONS

CYBER SECURITY

- **Assessments & Audits**

Forensic Five provides security based technology assessments and audits of systems, applications, servers, infrastructure, process and personnel.

- **Business Training**

Our comprehensive cyber security business training for employees, operation managers and executives, offers a unique and well constructed curriculum for understanding and preparing your organization for cyber attacks.

- **Consulting & Mitigation**

We provide consulting and mitigation for data breaches, vulnerability management, disaster recovery and policy development.

ASSESSMENT & AUDITS

CYBER SECURITY

Websites & Applications

Applications and Websites contain a stack of technologies that are used in their development. We investigate, test & research the vulnerabilities that exist in these systems and help correct, and mitigate their risk.

Organizational Process Audits

The most vulnerable systems are often associated with the daily processes and transactions of how a business operates. Testing the security of these systems allows us to examine the internal workings of the organization and test them for vulnerabilities.

Server & System Infrastructure

System Infrastructure testing decompiles the layers that manage and provision an organizations technology. We then examine each layer, and test them for vulnerabilities and how they process and communicate.

Employee & Organization Behaviours

Human Security testing looks at the organizational gatekeepers and their relationship with digital assets. We determine the natural vulnerabilities that occur from daily operations and business interactions involving employees.

PENETRATION TESTING

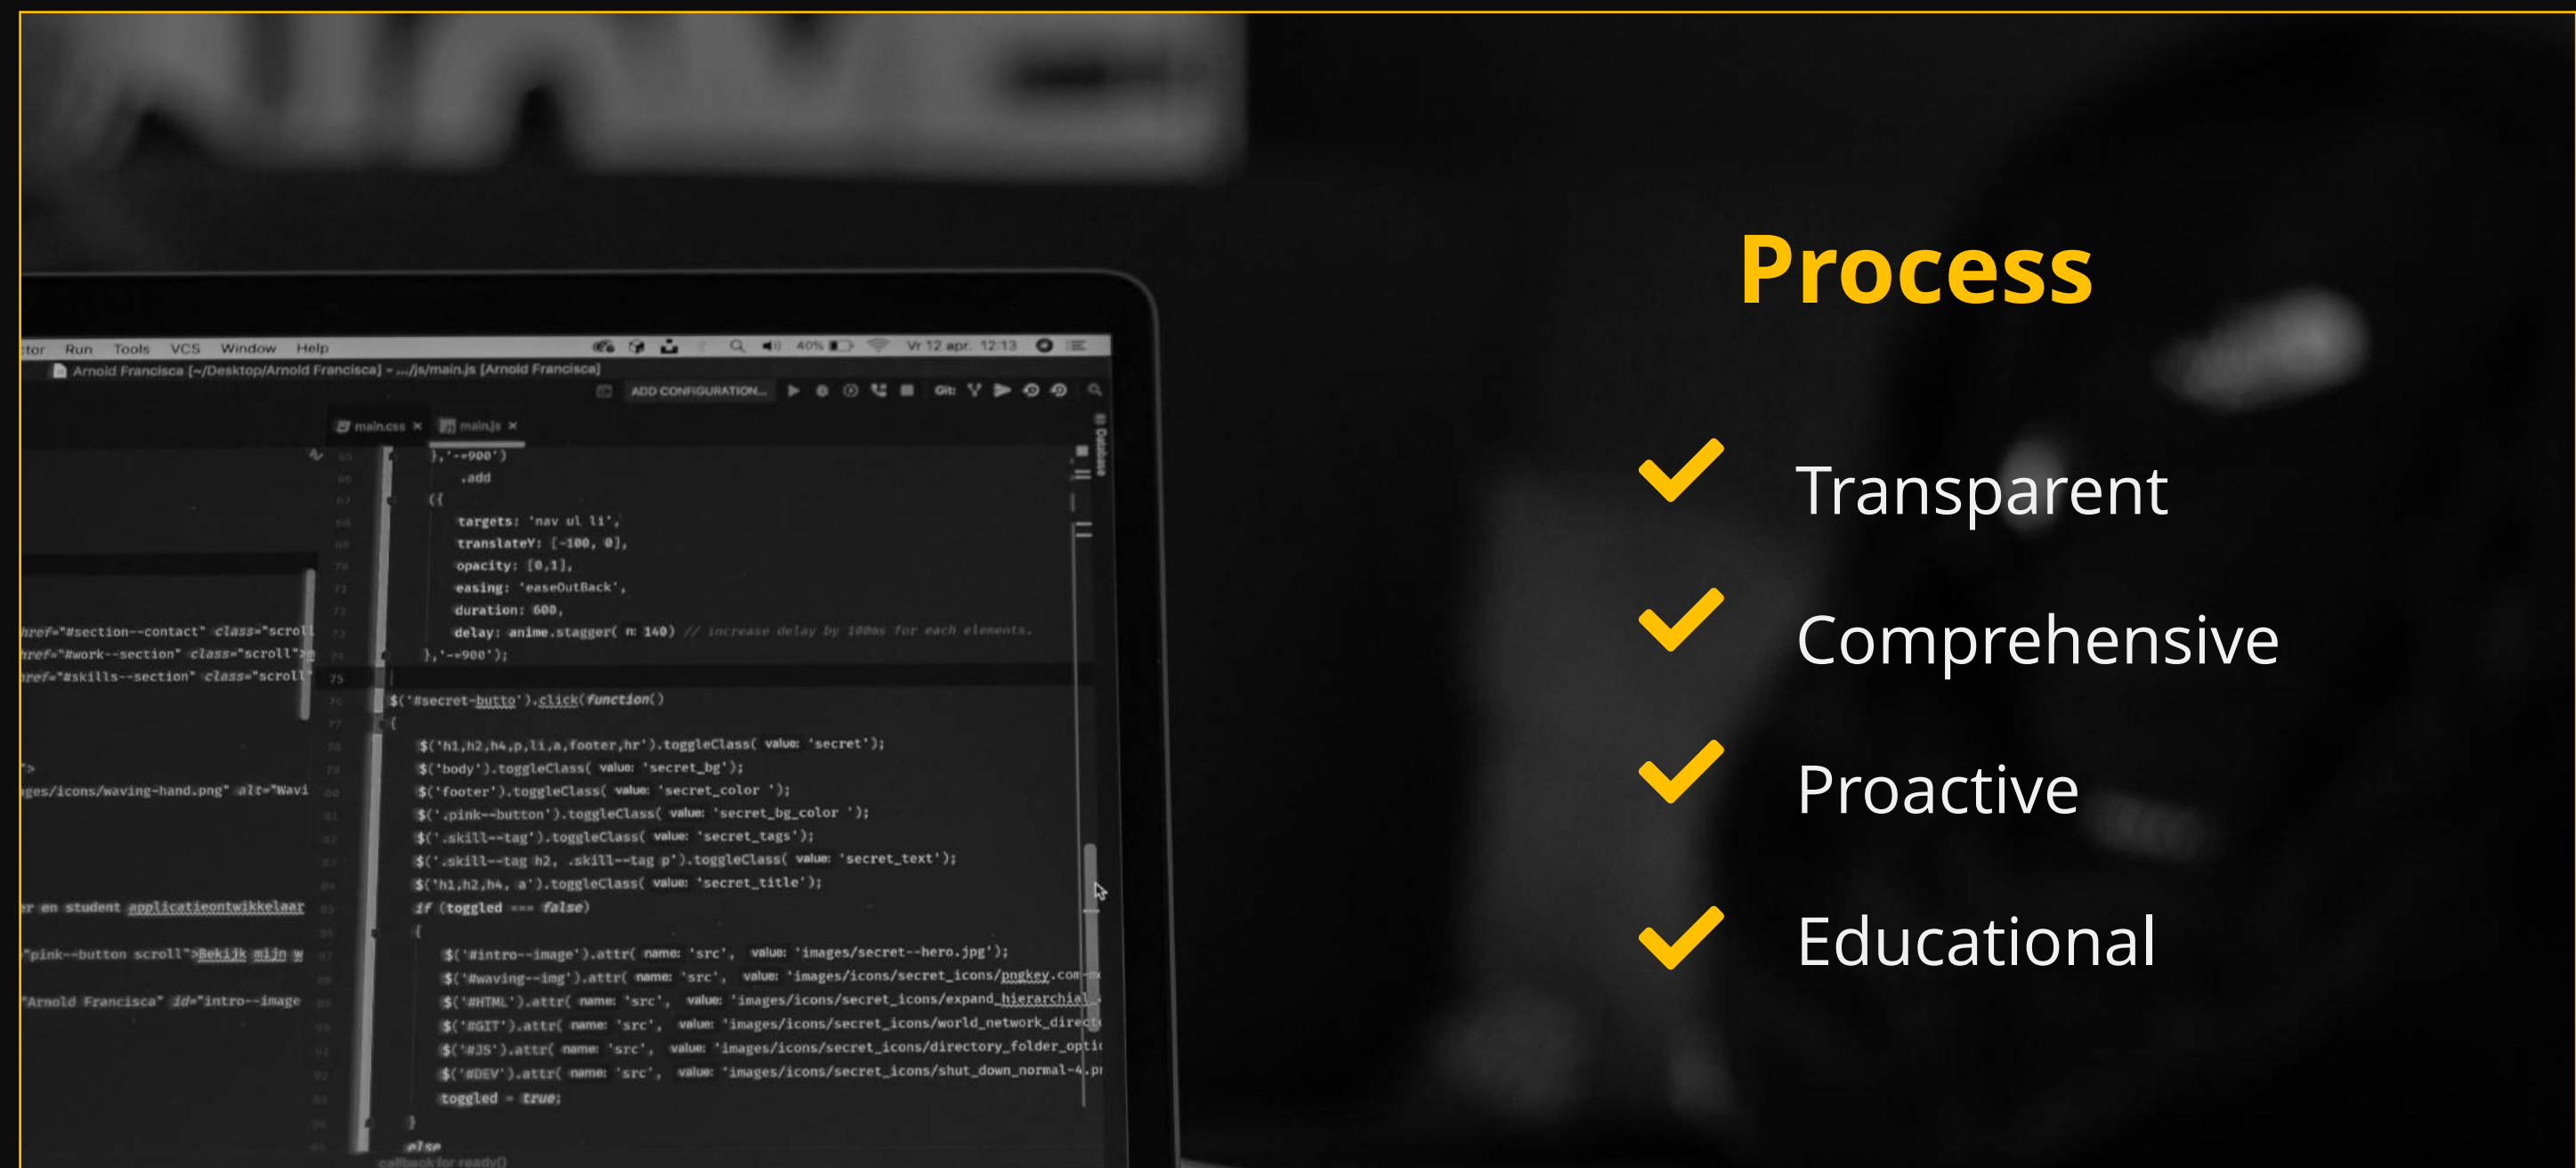

CYBER SECURITY

Practice Protection

The best way to prevent a data breach is to continually check, test, audit and assess your security level.

Technology evolves at an incredible pace, which makes protecting your digital assets a unique challenge.

Our penetration testing framework is robust and provides a clear view on the organizations security.

Process

- ✓ Transparent
- ✓ Comprehensive
- ✓ Proactive
- ✓ Educational

BUSINESS TRAINING

CYBER SECURITY

Employee Preparedness

Having a team that is aware, prepared and educated on how organizations are compromised is an efficient way to proactively protect your business.

Business Hardening

We provide training and operational strategies at the executive level that mitigate the digital and material risks that exist when operating in a digital economy.

CONSULTING

CYBER SECURITY

Policy Development

We help businesses build process and policy that prepares them for regulation compliance.

Process Development

We assist in designing the process for how businesses interact digitally, and how to protect themselves.

Vulnerability Management

We help identify, evaluate, repair, and report on security **vulnerabilities** in systems, and the software that runs on them.

Breach mitigation

We assist business in managing the aftermath of a data breach, by understanding the damage and how to protect.

Disaster Recovery

When a data breach occurs our emergency assistance team can help rebuild and recover your digital assets.

Third Party Assessment

When required we can offer our services as a third-party stakeholder to help bring transparency to a cyber attack.

INDUSTRIES WE SERVE

CYBER SECURITY

Working Together

Working together our goal is to bring a new level of awareness, protection and education to Canadian businesses.

We believe that by partnering with business leaders, government and compliance officers we can assist in developing new strategies that protect Canadians and their Data.

CYBER ATTACKS

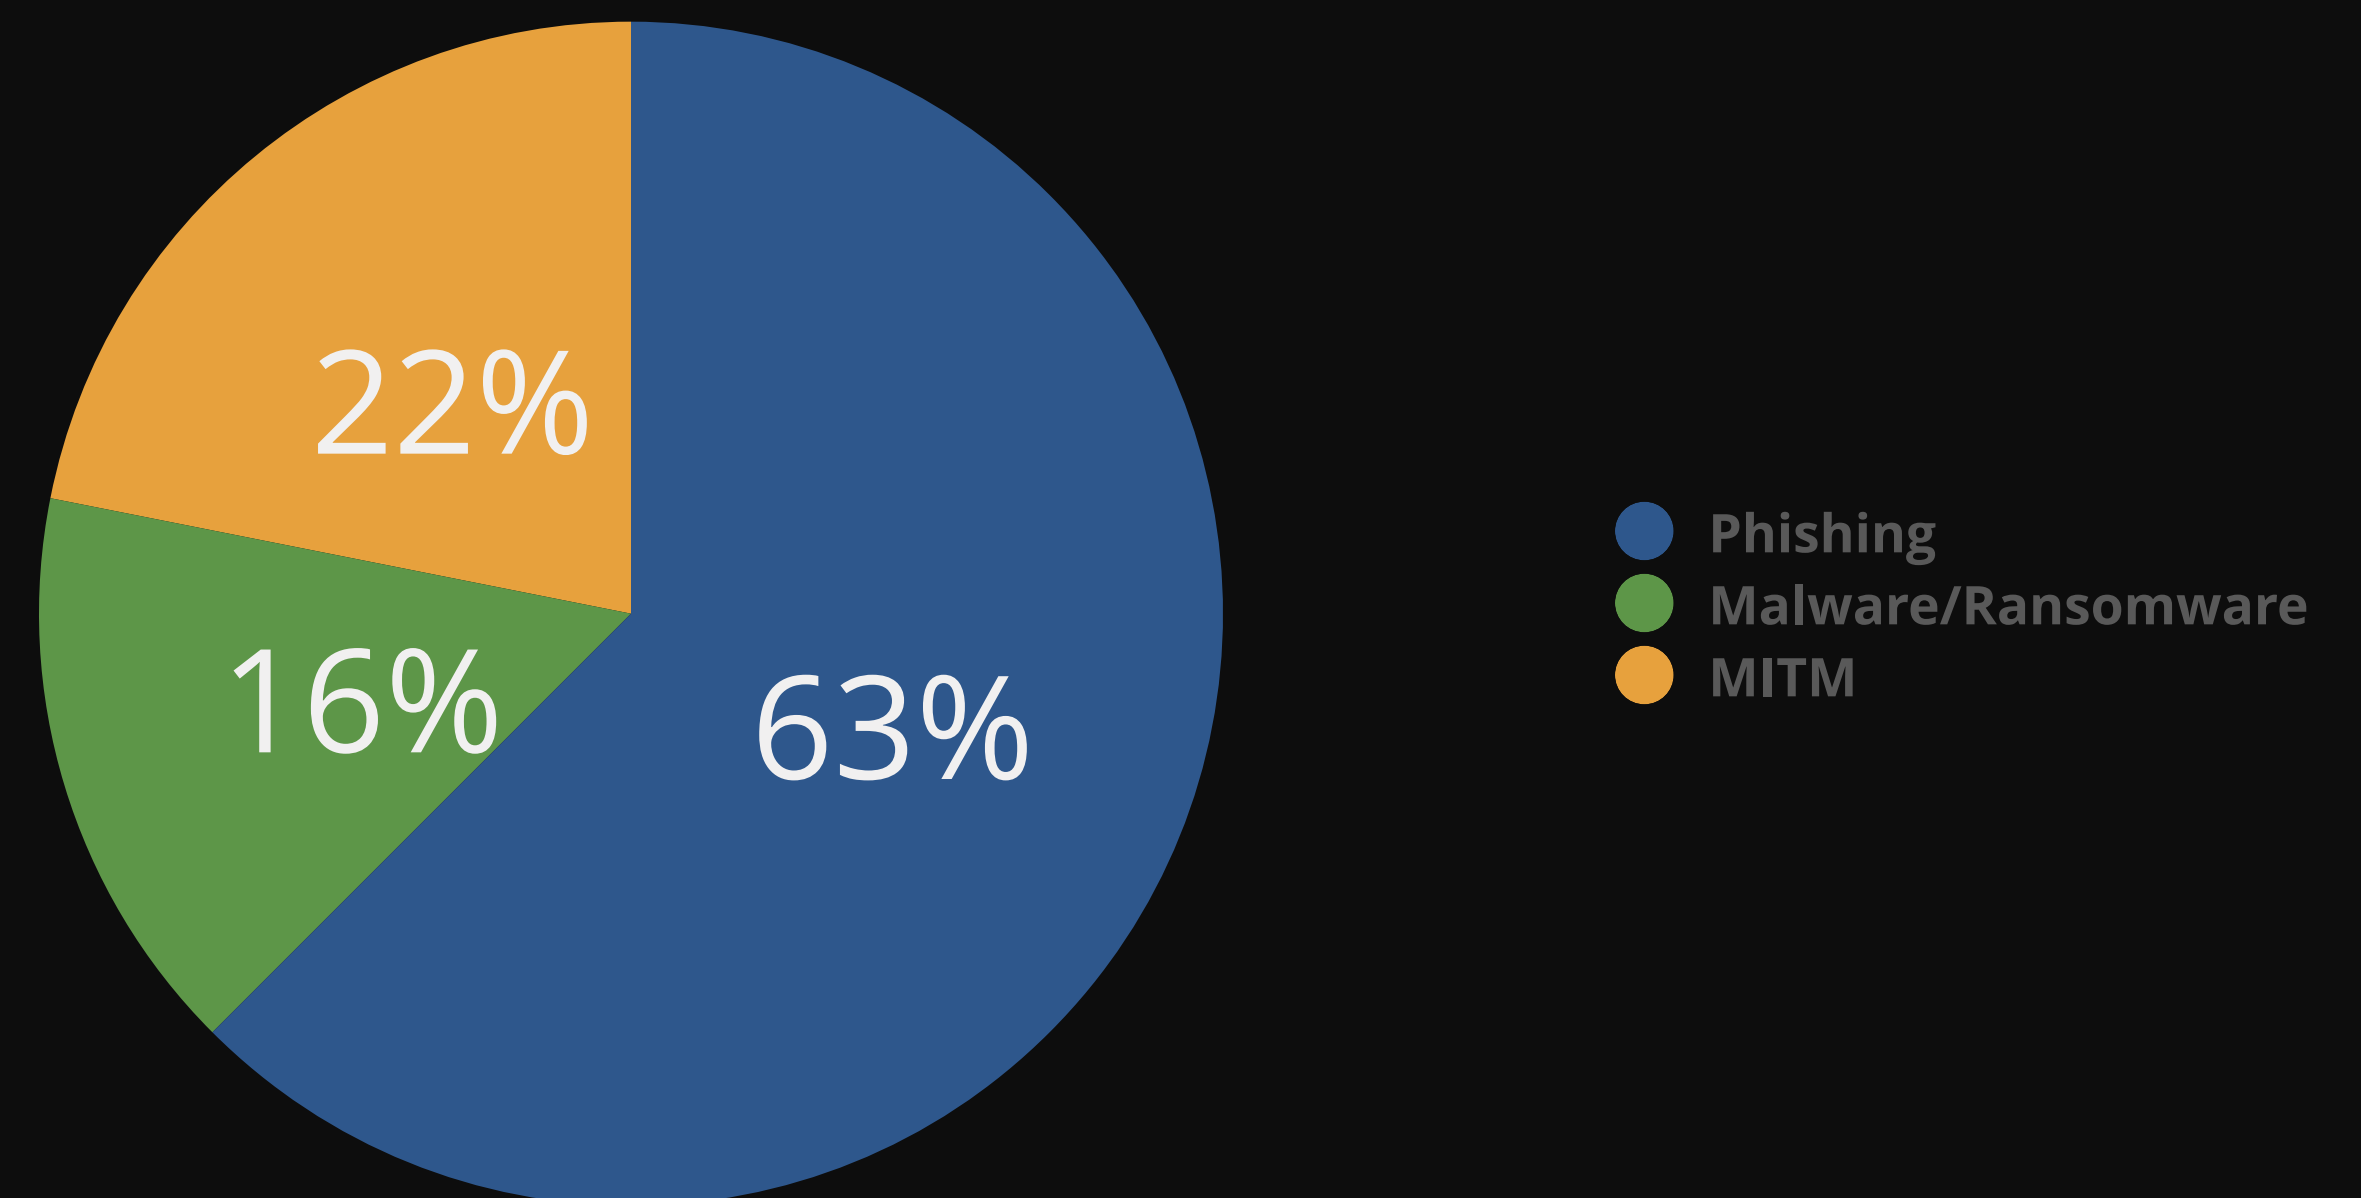

CYBER SECURITY

The Digital Battleground

The frequency of cyber security attacks can be directly correlated to the rapid adoption of technology.

- ✓ 62% of businesses experienced phishing and social engineering attacks in 2018
- ✓ Data breaches exposed 4.1 billion records in the first half of 2019.
- ✓ In 2019, a business will fall victim of ransomware every 14 seconds.

Attacks by Category

- Phishing
- Malware/Ransomware
- MITM

CLIENT TESTIMONIALS

K N O W N F O R E X C E L L E N C E

Paul - Pod Marketing

Since migrating to F5's managed servers we noticed that our issue with hacking and exploitation of our websites was reduced to a minimum. We're proud to report that in our 400 websites there have been no issues with exploitation of our application.

Bryan - Bye Insurance Agency

We have been working with Matt & his team since their inception and have been 100% satisfied. Matt and his team are superior at what they do and would have no problem recommending them to anyone in need server specialists
